

## PROJECT REFERENCES: MICROSOFT OFFICE 365™

Leveraging Office 365 enables you to focus on your business and still leverage the latest technology without having to manage the environment. Cloud technology brings the promise of agile adoption of new software and services with reduced implementation timelines and often times, lower cost of ownership. At ProSource, we have the experience in designing, evaluating, enhancing and optimizing IT environments...making technology work for you.

Whether you are looking to start by migrating your mail environment to Exchange Online or are wanting to address secure file sharing and collaboration between team members, or simply need more storage space for documents — Office 365 has a solution and we can help!

One of the largest developers and managers of shopping malls reached out to ProSource to assist with the development of an implementation work plan for migrating their Lotus Notes environment to a Microsoft platform. The client was interested in several possible Microsoft solutions: Office 365, a managed service, and an on-premise offering. After a thorough product analysis, cost structure and annual cost of ownership review, the client decided to pursue ProSource's recommendation — implementation of Office 365 — in their environment, which will net them an average savings of 37% per year. (The other options, would increase their current spend by as much as 69-88% per year.)

The client engaged with ProSource on the migration of their existing on-premise Lotus Notes messaging environment to Microsoft Office 365. The Office 365 migration efforts included email, calendaring and instant messaging functionalities.

### Products:

Office 365 - Exchange Online  
Office 365 - Lync Online  
OneDrive for Business

### Services Provided:

- Provided Business Process Consulting
- Provided IT Strategy Consulting
- Managed IT Implementation Projects
- Provided Security and/or Identity/Access Services
- Provided Email/Calendaring Migration and Deployment Services
- Provided Instant Messaging/Presence Deployment Services
- Developed and Delivered Training
- Provided Post Implementation Support

Since the initial mail migration project, the client has engaged with ProSource to take advantage of the other Office 365 technologies (Yammer, SharePoint Online, Skype for Business) and roll them out into their environment in a phased approach.
